

OWENS CORNING 703 FIBERGLASS ACOUSTIC BOARD WITH 'NO-FRAME' EDGE COATING

Owens Corning 703 Fiberglass Acoustic Board with 'No-Frame' Edge Coating has hardened edges on all four sides while the center of the board remains unaltered. The fiberglass board is dipped in fiberglass resin coating which creates stiff edges and corners.

The benefit of using 'No-Frame' fiberglass board is in the product's name: No frame is necessary with the use of this fiberglass board. Simply wrap the board with fabric and attach to the walls/ceilings without having to build a time consuming frame.
